

SANSOL

Heavy Duty Foaming Bathroom Cleaner

Sansol can be quickly and easily applied through a foaming gun.

Insist on **Whiteley Industrial** for your bathroom and washroom cleaning products

There are two key Work Health and Safety issues with maintaining bathrooms:-

- > Reducing the risk of infection.
- > Clean and safe floors.

Transmission of infection between employee's results in increased sick leave and can result in serious health issues. Floors which are not cleaned properly, can become slippery and can lead to slip accidents.

A proper cleaning routine using a disinfectant designed to kill germs and sanitise surfaces, while also removing soiling will improve the overall hygiene of a bathroom and significantly reduce the incidence of infection.

SANSOL is an acidic based Hospital Grade Disinfectant with excellent biocidal properties. It can be used in a number of applications in both industrial and commercial cleaning.

SANSOL kills HIV, Hepatitis B, Noro Virus and odour causing bacteria and effectively removes body fats and oils, hard water carbonate deposits, rust, urine and faeces stains, soap scum, algae and mildew. **SANSOL** has also been successfully used on ventilation systems to eradicate odour causing bacteria.

How to clean a bathroom or washroom using Sansol

It is recommended that staff view the educational DVD at www.whiteley.com.au prior to using Sansol.

Procedure for disinfection after an outbreak

1 APPLY NEAT TO SURFACE

Tip – use the 1L bottle with its convenient flip top lid to apply directly to surfaces.

2 AGITATE

3 LEAVE FOR 10 MINS

4 RINSE

Procedure for general cleaning and disinfection

1 APPLY

Apply to the surface through a foaming gun at 1 parts to 10 of water.

or

1 APPLY

Apply to the surface through portable spray hand pump at 1 parts to 10 of water (100mL/Litre).

2 AGITATE

For heavy soiling scrub or agitate Sansol with a nylon bristle broom or brush, this will help loosen any solids and save time when rinsing.

3 RINSE

Tips

The standard procedure for cleaning and disinfecting, bathroom and washroom areas is to completely remove all solids and disinfect all surfaces to a height of 2 metres.

For heavy duty soiling it may be necessary to leave Sansol in place for 10 minutes. This allows for maximum soil penetration.

Sansol can be used on most surfaces in washroom blocks including sinks, toilets, floors, walls and showers.

4 Save Time & Money

Time is money in the cleaning industry and 95% of every dollar spent is on labour. With Sansol one cleaner can cover large areas in very little time.
